DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 28 April 2005 has been entered.

Allowable Subject Matter

2. Claims 1-4 are allowed.

3. The following is an examiner's statement of reasons for allowance: Regarding claims 1-4 the prior art does not teach or fairly suggest the combination of a photodetector, and integrator circuit outputting a voltage to a signal processing unit as claimed in claim 1. The examiner notes that although the use of the photodetectors and integrators (see for example McDaniel US 4,996,413), variable capacity integrator circuits, comparators, and capacity control sections (see for example Mizuno JP 09-051476) and capacitors which function as CDS circuits (see for example Hamasaki US 5,187,583) are known in the art individually, the specific combination claimed is not taught or suggested. While McDaniel teaches placing an integrator in front of an A/D converter and Mizuno teaches the use of a variable capacity integrator circuit, comparator and capacity control section as claimed in order to perform A/D conversion,

the prior art does not teach or suggest placing a capacitor which functions as part of a CDS circuit in between the integrator and the A/D converter of McDaniel in view of Mizuno, even though the use of capacitors which function as CDS circuits is known, therefore the claims 1-4 are allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The following further shows the state of the art in image sensors and integrators which are considered relevant to the current application:
